

VFX Hit Impact Pack

The **VFX Hit Impact Pack** is a collection of **8 unique impact effects** designed for the **Built-in Render Pipeline** in Unity. It utilizes **Particle Systems and Post-Processing** to create visually stunning and dynamic hit effects, making it perfect for **combat games, action sequences, and special attacks**.

Each effect comes with **multiple color variations**, allowing customization for different weapon types, elemental damage, or attack intensities. Whether it's a **melee impact, magic explosion, energy burst, or bullet hit**, this pack provides a wide range of **high-quality, optimized VFX**.

How to Use?

1. Import the **VFXHitImpactPack** into your Unity project.
2. Enter play mode and press “**Left Mouse**” to test the next effect in demo scene.
3. Easily integrate the effects into your project with drag and drop functionality like Drag and Drop Prefab into scene.
4. **Postprocessing** is required from package manager.

Customization:

- Adjust **Particle Colors** for different attack types.
- Modify **Start Size & Lifetime** for varied intensity.
- Enable **Post-Processing Effects** for high-quality visuals and adjust bloom intensity based on the impact type.
